#### COVID-19: le président de l'Assemblée nationale en isolement préventif

Le président de l'Assemblée nationale, François Paradis, s'est placé en isolement par mesure préventive dans l'attente des résultats d'un test de dépistage auquel sa conjointe se soumettra après avoir ressenti des symptômes de la COVID-19.

#### Montreal health official urges vigilance as city moves into maximum COVID-19 alert level

Montreal's public health director is urging 18-to-34-year-olds to get tested for COVID-19, as the city moves into the maximum pandemic alert level. She says people in the 18-34 age bracket are testing positive at disproportionately higher rates than are older people but are less likely to get tested. Plante says it's important that people avoid indoor and outdoor gatherings.

Nova Scotia company waiting on Health Canada approval for rapid antigen test for COVID-19

The Sona Nanotech lab in Dartmouth, N.S., is making history by developing a rapid antigen test for COVID-19. Here's a simple breakdown of how the test works: After a nasal pharyngeal swab is administered, the swab is placed in a tube of solution for a few moments. Then, a sample of that is placed on a lateral flow test, like a pregnancy test. The results appear within 15 minutes.

Sona Nanotech is the only company in Canada to come up with this technology.

Right now, it's a waiting game for the lab as it seeks approval from Health Canada.

### **Nova Scotia should lift some COVID-19 restrictions to help businesses, group says**

As COVID-19 numbers remain low in Nova Scotia, the Halifax Chamber of Commerce is calling for the province to relax some of the restrictions to help businesses survive.

Earlier this month, the Downtown Halifax Business Commission [estimated in an informal survey](#) that only 20 to 25 per cent of the regular workforce has returned to working in the downtown.
