La période d'isolement réduite à cinq jours pour les vaccinés

Les Québécois pleinement vaccinés atteints de la COVID-19 pourront s'isoler pendant cinq jours plutôt que 10, a annoncé mardi la Santé publique.

Cette mesure s'applique uniquement aux personnes asymptomatiques ou dont les symptômes ont régressé. Le malade doit aussi avoir passé 24 heures sans faire de fièvre. Dans les cinq jours suivants, la personne infectée devra porter un masque et conserver une distance de deux mètres avec les autres. La durée de l'isolement des travailleurs de la santé est toutefois maintenue à sept jours, sauf pour ceux qui ne sont pas en contact avec des patients.

New testing and isolation measures to mitigate impacts of Omicron variant / schools moving to home learning

The following measures will come into effect on **Tuesday, Jan. 4, at 11:59 p.m.:**

PCR tests will be reserved for:

- People in areas at highest risk, including health-care workers and those who live or work in long-term care facilities, homeless shelters and correctional facilities.
- People who are symptomatic and aged 50 and over.
- People who are symptomatic and immunocompromised or pregnant.
- People who need a PCR test for travel.
- People who are identified as a priority by Public Health.

Everyone else, including those who are symptomatic but under 50 and do not live in a vulnerable setting, will be advised to take point-of-care rapid tests when symptomatic. A positive rapid test will be treated as a positive result for COVID-19 and people will be asked to register their result through a new form that will be available online next week. They will also need to follow new isolation guidelines.

Public Health is introducing a shorter isolation period for people who have tested positive. This change is being introduced to help prevent staff shortages among those who support critical infrastructure, including health care, long-term care, power, water, law enforcement, transportation, food security, child care and education.

Vaccinated people who have tested positive, as well as vaccinated, asymptomatic, close household contacts, will need to isolate for five days. Unvaccinated people who have tested positive, as well as unvaccinated, asymptomatic, household contacts, will need to isolate for 10 days.
